

Your Audi/VW hiring dashboard in Power BI

A four-page report built from **AUDI_VW_Final_Funnel_V2_Clean.xlsx**. It shows where candidates drop out of the funnel, how each recruiter converts, and whether accepted offers will cover each joining wave. Every number in the preview below was calculated from your file.

131 unique candidates (134 interview records) **10 Aug – 15 Sep 2026** interview dates

20 offers, **12** accepted **80** analysts needed by 1 Nov

Overview: the one-screen status. The funnel shows the biggest drop is between passing interviews and getting an offer, and the wave chart shows every wave has fewer offers than the 16 new hires it needs.

Before you start

- 10 Page 4: Candidate profile
- 11 Check, save and update

What each page shows

Page	What's on it
Overview	Six number cards, the hiring funnel, offers vs new hires needed per wave, offer status, and the 35 candidates who passed but have no offer.
Interview pipeline	Interviews per week by outcome, why candidates didn't pass, recruiter results, and technical vs ops decisions.
Offers and joining	Offer numbers, who joins in which week, offers per recruiter, and the full offer list.
Candidate profile	Right-click any name to see that person's results and interviewer feedback.

You only need Power BI Desktop (free from the Microsoft Store). You don't edit the Excel file at all, so the daily file can arrive in its usual format. Everything is done by clicking, except step 5, where you copy and paste a few short one-line formulas.

Build it step by step

1 Set up the daily file

You won't change anything inside the Excel file. All the fixes happen in Power BI and repeat automatically every time you refresh.

1. Pick one folder for the file, for example `C:\Hiring\`.
2. Each day, save the new file into that folder with **the same name** (*AUDI_VW_Final_Funnel_V2_Clean.xlsx*), replacing yesterday's file.

Power BI remembers the folder and file name. As long as both stay the same, clicking Refresh loads the new day's data.

2 Import the data

1. Open Power BI Desktop.
2. Click **Home** > **Get data** > **Excel workbook**, choose the file in your folder and click **Open**.
3. In the Navigator window, tick **Table4**, **Offering Sheet** and **SD Analyst Overview**.
4. Click **Transform Data** (not Load). The Power Query Editor opens.
5. In the list on the left, right-click each item > **Rename: Table4** to `Candidates`, **Offering Sheet** to `Offers`, **SD Analyst Overview** to `Waves`.

3 Clean the data (in Power Query)

Power Query records every click as a step, and replays them on each refresh. You only do this once.

Tip: to select several columns, hold `Ctrl` and click their headers.

Candidates (click it in the list on the left)

1. Hold `Ctrl` and select these column headers: **Name**, **Date**, **Recruiter**, **Technical**, **Ops**,

Accepted, Feedback. Right-click one of them › **Remove Other Columns.**

2. Right-click the **Name** header › **Transform** › **Trim** (removes extra spaces).
3. Fix five names so they match the Offering Sheet. For each row below: right-click **Name** › **Replace Values**, type the first name in *Value To Find* and the second in *Replace With*, click OK.

Value To Find	Replace With
Marawan Ali Sadek	Marwan Ali Sadek
Hossam Abdel Monem	Hossam Abdel-Moneim
Hager Talat Ibrahim	Hagar Talaat
Berta Email	Berta Emil
Saleh Saleh	Saleh Essam (<i>only if it's the same person</i>)

4. Click the small icon at the left of the **Date** header and choose **Date**.
5. Double-click the **Accepted** header and rename it *Outcome* .
6. Right-click **Outcome** › **Replace Values**. Value to find: *NCNS* , replace with: *No show* . Click OK.
7. Right-click **Outcome** › **Replace Values** again. Value to find: *null* , replace with: *Pending interview* . Click OK.
8. Right-click **Recruiter** › **Replace Values**. Value to find: *null* , replace with: *Unassigned* . Click OK.
9. Select the **Date** column, then click **Add Column** › **Date** › **Week** › **Start of Week**.

Don't worry about people who appear twice because they were re-interviewed. The calculations in step 5 count each person only once.

Offers

1. Select **Candidate Full Name, Joining Date, Offer Status**. Right-click › **Remove Other Columns**.
2. Double-click **Candidate Full Name** and rename it *Name* . Right-click it › **Transform** › **Trim**.
3. Click the icon at the left of the **Joining Date** header and choose **Date**. Rows with "TBC" now show *Error*.
4. Right-click **Joining Date** › **Replace Errors**, type *null* , click OK. The errors become

4. Right-click **Joining Date** > **Replace Errors**, type **NULL** , click OK. The errors become empty.
5. Click **Add Column** > **Conditional Column**. New column name: **Offer Group** . Fill in the rules, clicking **Add Clause** for each extra line:

	Column	Operator	Value	Output
If	Offer Status	equals	Offer Released And Accepted	Accepted
Else If	Offer Status	equals	Joined	Accepted
Else If	Offer Status	equals	Offer In Process	In progress
Else If	Offer Status	equals	Offer Released	In progress
Else	Lost			

Click OK.

6. Click **Add Column** > **Conditional Column** again. New column name: **Wave** . Rules (keep this order):

	Column	Operator	Value	Output
If	Joining Date	is after or equal to	01/11/2026	Wave 5
Else If	Joining Date	is after or equal to	15/10/2026	Wave 4
Else If	Joining Date	is after or equal to	01/10/2026	Wave 3
Else If	Joining Date	is after or equal to	15/09/2026	Wave 2
Else If	Joining Date	is after or equal to	01/09/2026	Wave 1
Else	TBC			

Click OK. Use the date picker so the dates match your computer's date format.

7. Offers with no joining date show *Error* in the Wave column. Right-click the **Wave** header > **Replace Errors**, type **TBC** , click OK.
8. Select the **Joining Date** column, then click **Add Column** > **Date** > **Week** > **Start of Week**.

Waves

1. Select **Wave, Join Date, Demand**. Right-click > **Remove Other Columns**.

2. Click **Home** › **Remove Rows** › **Remove Blank Rows**.
3. Click the icon at the left of **Join Date** and choose **Date**.

Click **Home** › **Close & Apply**.

4 Check the links between tables

1. Click the **Model view** icon on the left side (it looks like three connected boxes).
2. You should see a line between **Candidates** and **Offers**, and a line between **Waves** and **Offers**. If a line is missing, drag **Name** from Offers onto **Name** in Candidates, or **Wave** from Offers onto **Wave** in Waves.
3. **One setting to change:** double-click the line between Candidates and Offers. Set **Cross filter direction** to **Both** and click **Save**. This lets the recruiter and outcome filters work on offers too.

5 Add the calculations

These are the numbers the cards and charts use. Each one is a single line.

1. Go back to **Report view** (the top icon on the left side).
2. In the **Data** pane on the right, click the word **Candidates**.
3. Click **Home** › **New measure**. A formula bar opens at the top.
4. Copy the **first line** below, paste it into the formula bar (replacing what's there) and press .
5. Repeat steps 3 and 4 for each line, in order.

14 measures, one per line

```
Candidates = DISTINCTCOUNT(Candidates[Name])
Attended = CALCULATE([Candidates], Candidates[Technical] IN {"Passed", "Failed"})
Passed = CALCULATE([Candidates], Candidates[Outcome] = "Accepted")
Pass Rate = DIVIDE([Passed], [Attended])
No Shows = CALCULATE([Candidates], Candidates[Outcome] = "No show")
Offers Made = COUNTROWS(Offers)
Offers Accepted = CALCULATE([Offers Made], Offers[Offer Group] = "Accepted")
Offers In Progress = CALCULATE([Offers Made], Offers[Offer Group] = "In progress")
```

```

Offers Lost = CALCULATE([Offers Made], Offers[Offer Group] = "Lost")
Joined = CALCULATE([Offers Made], Offers[Offer Status] = "Joined")
Passed No Offer = [Passed] - CALCULATE([Offers Made], Candidates[Outcome] = "Accepted")
Total Demand = CALCULATE(MAX(Waves[Demand]), REMOVEFILTERS(Waves))
Gap to Demand = [Total Demand] - [Offers Accepted]
New Hires Needed = VAR d = MAX(Waves[Join Date]) RETURN MAX(Waves[Demand]) - CALCUL

```

Last, click **Pass Rate** in the Data pane and click the % button in the **Measure tools** ribbon.

6 Apply the theme and create the pages

1. Download **AudiVW_Hiring_Theme.json** (attached in the chat).
2. Click **View** > **Themes** (the small arrow) > **Browse for themes** and open the file. Visuals now get white boxes on a light grey page and the right colours.
3. At the bottom, double-click *Page 1* and rename it *Overview*. Click **+** three times and name the new pages *Interview pipeline*, *Offers* and *joining*, *Candidate profile*.

How to add any visual: click an empty part of the page, click the visual's icon in the **Visualizations** pane, then drag fields from the **Data** pane into the boxes listed (for example *X-axis* or *Values*). Drag the corners to resize. To rename what a field shows, double-click it inside those boxes.

7 Build page 1: Overview

1. **Header:** Insert > **Shapes** > **Rectangle** across the top, colour #14233A. Add **Insert** > **Text box** on it with the title *Audi/VW hiring funnel* in white.
2. **Filters:** add a **Slicer** with **Date** (from Candidates) and another **Slicer** with **Recruiter**. Place them on the right of the header.
3. **Six cards:** add a **Card** and drag in **Candidates**. Copy and paste the card five times and swap the field for **Attended**, **Pass Rate**, **Offers Made**, **Offers Accepted** and **Gap to Demand**. Line them up in one row.
4. **Funnel:** add a **Funnel** and drag into *Values*, in this order: **Candidates**, **Attended**, **Passed**, **Offers Made**, **Offers Accepted**, **Joined**. In **Format** > **Data labels**, set label contents to **Data**

value, percent of previous.

If the funnel only accepts one field, use a **Clustered bar chart** instead with the same six fields in X-axis.

- 5. **Offers vs new hires per wave:** add a **Line and stacked column chart**. X-axis: **Wave** (from Waves). Column y-axis: **Offers Made**. Column legend: **Offer Group**. Line y-axis: **New Hires Needed**. In **Format > Columns**, colour Accepted green, In progress blue, Lost red (hex codes are in the table below).
- 6. **Offer status:** add a **Donut chart**. Legend: **Offer Status**. Values: **Offers Made**.
- 7. **No-offer card:** add a **Card** with **Passed No Offer** and rename it *Passed, but no offer yet*.

Colour	Hex	Use for
Green	#2F8F6B	Accepted
Red	#B84A3A	Rejected, Lost
Amber	#E0A21B	No show
Blue	#3D6A96	In progress, Pending interview, funnel
Light blue	#8DB3D6	Rescheduled
Grey	#9AA6B2	Cancelled

8 Build page 2: Interview pipeline

- 1. **Header and filters:** on page 1, select the rectangle, text box and both slicers, press **Ctrl + C**, go to page 2 and press **Ctrl + V**. If asked, click **Sync**. Change the title text.
- 2. **Interviews per week:** add a **Stacked column chart**. X-axis: **Start of Week** (from Candidates). Y-axis: **Candidates**. Legend: **Outcome**. If the axis shows Year/Quarter/Month, click the arrow next to **Start of Week** in the X-axis box and choose **Start of Week** instead of *Date Hierarchy*.
- 3. **Other outcomes:** add a **Clustered bar chart**. Y-axis: **Outcome**. X-axis: **Candidates**. In the **Filters** pane (for this visual), open Outcome and untick **Accepted**.
- 4. **Recruiter table:** add a **Table** with **Recruiter, Candidates, Attended, Passed, Pass Rate, No Shows, Offers Made**.
- 5. **Traffic lights (optional):** in the table's Columns box, click the arrow next to **Pass Rate** >

Conditional formatting > Icons > OK. Power BI picks green, amber and red for you.

6. **Technical vs ops:** add a **Matrix**. Rows: **Technical**. Columns: **Ops**. Values: **Candidates**. In the **Filters** pane for this visual, set **Technical** and **Ops** to show only **Passed** and **Failed**.

9 Build page 3: Offers and joining

1. **Header:** paste the rectangle and text box from page 1 (no need for the slicers here) and change the title.
2. **Five cards:** **Offers Accepted, Offers In Progress, Offers Lost, Joined, Passed No Offer**.
3. **Joiners per week:** add a **Stacked column chart**. X-axis: **Start of Week** (from Offers). Y-axis: **Offers Made**. Legend: **Offer Group**. As on page 2, pick **Start of Week** instead of Date Hierarchy.
4. **Offers per recruiter:** add a **Stacked bar chart**. Y-axis: **Recruiter**. X-axis: **Offers Made**. Legend: **Offer Group**.
5. **Offer list:** add a **Table** with **Name, Offer Status, Joining Date** and **Wave**, all from Offers. If Joining Date splits into Year/Month/Day, click its arrow and choose **Joining Date**.

10 Build page 4: Candidate profile

1. Open the page and click an empty spot. At the bottom of the **Visualizations** pane, find **Drill through** and drag **Name** (from Candidates) into it. A Back button appears.
2. Add a **Card** for each of: **Name, Recruiter, Technical, Ops, Offer Status, Joining Date**.
3. Add a **Table** with only **Feedback**. In **Format > Values**, turn on **Text wrap**. Make it large.
4. Try it: on page 3, right-click a name > **Drill through > Candidate profile**. In Desktop, **Ctrl**+click the Back button to return.

11 Check, save and keep it updated

With no filters selected, your cards should show:

Card	Should show

Candidates	131
Attended	103
Passed / Pass Rate	54 / 52%
No Shows	11
Offers Made	20
Offers Accepted / In Progress / Lost	12 / 6 / 2
Joined	1
Passed No Offer	35
Gap to Demand	68

These match the file you uploaded; they'll change as the daily data changes. If Candidates shows 134, step 5's first line used COUNTROWS instead of DISTINCTCOUNT. If Passed No Offer is higher than expected, a name is spelled differently in the two sheets (see the tip below).

Light theme
